Pollution Control Industries of America collects, stores and blends waste solvent materials to be utilized as a secondary fuel for re-sale to heavy industries such as cement kilns. The main operation at the facility is the bulking of containerized hazardous waste for shipment to disposal facilities. PCIA also provides blending and solidification of non-hazardous waste. PCB waste is stored temporarily and then transported by PCIA to a proper disposal facility.

Solid waste management units utilized by the facility are eight storage tanks and two blending tanks. There is also a drum storage area that is considered a solid waste management unit, with approximately 275 drums at the time of inspection. PCIA is in compliance with state and federal hazardous waste regulations and appears to be a good candidate for accepting CERCLA wastes for treatment and storage.

STATE INVOLVEMENT

☒ Preliminary Assessments ☐ Site Inspection ☐ follow-up Site Inspection
